T. ROWE PRICE

Equity Income Portfolio

A stock fund seeking substantial dividend
income and long-term capital growth.

The Securities and Exchange Commission has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

Mutual fund shares are not deposits or obligations of, or guaranteed by, any depository institution. Shares are not insured by the FDIC, Federal Reserve, or any other government agency, and are subject to investment risks, including possible loss of the principal amount invested.

SUMMARY

Investment Objective

The fund seeks to provide substantial dividend income as well as long-term growth of capital through investments in the common stocks of established companies.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the fund. There may be additional expenses that apply as described in your insurance contract prospectus.

Fees and Expenses of the Fund

	<i>Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)</i>
Management fee	0.85%
Other expenses	0.00%
Total annual fund operating expenses	0.85%

Example This example is intended to help you compare the cost of investing in the fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<i>1 year</i>	<i>3 years</i>	<i>5 years</i>	<i>10 years</i>
\$87	\$271	\$471	\$1,049

Portfolio Turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's performance. During the most recent fiscal year, the fund's portfolio turnover rate was 13.0% of the average value of its portfolio.

Investments, Risks, and Performance

Principal Investment Strategies The fund will normally invest at least 80% of its net assets in common stocks, with 65% in the common stocks of well-established companies paying above-average dividends.

The fund typically employs a "value" approach in selecting investments. Our in-house research team seeks companies that appear to be undervalued by various measures and may be temporarily out of favor but have good prospects for capital appreciation and dividend growth.

In selecting investments, we generally look for companies in the aggregate with one or more of the following:

- an established operating history;
- above-average dividend yield relative to the S&P 500;
- low price/earnings ratio relative to the S&P 500;
- a sound balance sheet and other positive financial characteristics; and
- low stock price relative to a company's underlying value as measured by assets, cash flow, or business franchises.

Under normal market conditions, substantial dividend income means that the yield on the fund's portfolio securities generally exceeds the yield on the fund's benchmark. In pursuing its investment objective, the fund has the discretion to deviate from its normal investment criteria, as previously described, and purchase securities that the fund's management believes will provide an opportunity for substantial appreciation.

These situations might arise when the fund's management believes a security could increase in value for a variety of reasons, including an extraordinary corporate event, a new product introduction or innovation, a favorable competitive development, or a change in management.

While most assets will be invested in U.S. common stocks, the fund may invest in other securities, including foreign stocks, and use futures and options in keeping with fund objectives.

The fund may sell securities for a variety of reasons, such as to secure gains, limit losses, or redeploy assets into more promising opportunities.

Principal Risks As with any mutual fund, there is no guarantee that the fund will achieve its objective. The fund's share price fluctuates, which means you could lose money by investing in the fund. The principal risks of investing in this fund are summarized as follows:

Active management risk The fund is subject to the risk that the investment adviser's judgments about the attractiveness, value, or potential appreciation of the fund's investments may prove to be incorrect. If the securities selected and strategies employed by the fund fail to produce the intended results, the fund could underperform other funds with similar objectives and investment strategies.

Risks of stock investing Stocks generally fluctuate in value more than bonds and may decline significantly over short time periods. There is the chance that stock prices overall will decline because stock markets tend to move in cycles, with periods of rising prices and falling prices. The value of a stock in which the fund invests may decline due to general weakness in the stock market or because of factors that affect a company or a particular industry.

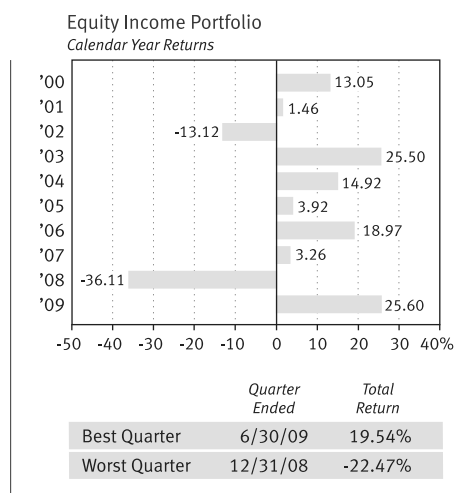

Investment style risk Different investment styles tend to shift in and out of favor, depending on market conditions and investor sentiment. The fund's value approach to investing could cause it to underperform other stock funds that employ a different investment style. The intrinsic value of a stock with value characteristics may not be fully recognized by the market for a long time or a stock judged to be undervalued may actually be appropriately priced at a low level.

Foreign investing risk This is the risk that the fund's investments in foreign securities may be adversely affected by political and economic conditions overseas, reduced liquidity, or decreases in foreign currency values relative to the U.S. dollar.

Derivatives risk To the extent the fund uses futures and options, it is exposed to additional volatility and potential losses.

Performance The bar chart showing calendar year returns and the average annual total returns table indicate risk by illustrating how much returns can differ from one year to the next and how fund performance compares with that of a comparable market index. The fund's past performance is not necessarily an indication of future performance.

The fund can also experience short-term performance swings, as shown by the best and worst calendar quarter returns during the years depicted.

Average Annual Total Returns

	Periods ended December 31, 2009		
	1 year	5 years	10 years
Equity Income Portfolio	25.60%	0.49%	3.95%
S&P 500 Index	26.46	0.42	-0.95
Lipper Variable Annuity Underlying Equity Income Funds Average	22.90	0.33	2.49

Updated performance information is available through troweprice.com or may be obtained by calling 1-800-469-5304.

Management

Investment Adviser T. Rowe Price Associates, Inc. (T. Rowe Price).

Portfolio Manager Brian C. Rogers is Chairman of the fund's Investment Advisory Committee. Mr. Rogers has been chairman of the committee since the fund's inception in 1994 and he joined T. Rowe Price in 1982.

Purchase and Sale of Fund Shares

The fund does not require a minimum amount for initial or subsequent purchases, although your insurance company may impose investment minimums.

You may purchase, redeem, or exchange shares of the fund on any day the New York Stock Exchange is open for business. You must purchase, redeem, and exchange shares through your insurance company.

Tax Information

Any dividends are declared and paid quarterly in March, June, September, and December. Any capital gains are declared and paid annually, usually in December. Fund distributions may be taxed as ordinary income or capital gains, unless you invest through an IRA, 401(k) plan, or other tax-deferred account.

Payments to Insurance Companies, Broker-Dealers, and Other Financial Intermediaries

The fund is generally available only through variable annuity or variable life insurance contracts. The fund and/or its related companies may pay the insurance company or intermediary for the sale of fund shares and related services. These payments may be a factor that the insurance company considers or may

create a conflict of interest by influencing the broker-dealer or other intermediary to recommend a variable insurance product or the fund over another investment or to include the fund as an underlying investment option in a variable contract. Ask your insurance company or financial intermediary, or visit your insurance company's or financial intermediary's Web site, for more information.

As an investor in a T. Rowe Price fund through your variable annuity or variable life insurance contract, you will want to know about the following policies and procedures that apply to the funds. For instructions on how to purchase and redeem shares, read the insurance contract prospectus.

PRICING SHARES AND RECEIVING SALE PROCEEDS

Shares of the fund are designed to be offered to insurance company separate accounts established for the purpose of funding variable annuity and life insurance contracts. Variable annuity and variable life contract holders or participants are not the shareholders of the fund. Rather, the separate account of the insurance company is the shareholder. The variable annuity and variable life contracts are described in separate prospectuses issued by the insurance companies. The fund assumes no responsibility for such prospectuses, or variable annuity or variable life contracts.

Shares of the fund are sold and redeemed without the imposition of any sales commission or redemption charge. However, certain other charges may apply to annuity or life contracts. Those charges are disclosed in the insurance contract prospectus.

Your ability to exchange from this fund to any other T. Rowe Price fund that serves as an investment option under your insurance contract is governed by the terms of that contract and the insurance contract prospectus, as well as the fund's excessive trading policy described in this section.

How and When Shares Are Priced

The share price (also called "net asset value" or NAV per share) for a fund is calculated at the close of the New York Stock Exchange, normally 4 p.m. ET, each day that the exchange is open for business. To calculate the NAV, the fund's assets are valued and totaled, liabilities are subtracted, and the balance, called net assets, is divided by the number of shares outstanding. Market values are used to price stocks and bonds. Market values represent the prices at which securities actually trade or evaluations based on the judgment of the fund's pricing services. If a market value for a security is not available, the fund will make a good faith effort to assign a fair value to the security by taking into account factors that have been approved by the fund's Board of Directors. This value may differ from the value the fund receives upon sale of the securities. Amortized cost is used to price securities held by money funds and certain other debt securities held by a fund. Investments in mutual funds are valued at the closing NAV per share of the mutual fund on the day of valuation.

Non-U.S. equity securities are valued on the basis of their most recent closing market prices at 4 p.m. ET except under the circumstances described below. Most foreign markets close before 4 p.m. ET. For securities primarily traded in the Far East, for example, the most recent closing prices may be as much as 15 hours old at 4 p.m. ET. If a fund determines that developments between the close of a foreign market and 4 p.m. ET will, in its judgment, materially affect the value of some or all of the fund's securities, the fund will adjust the previous closing prices to reflect what it believes to be the fair value of the securities as of 4 p.m. ET. In deciding whether to make these adjustments, the fund reviews a variety of factors, including developments in foreign markets, the performance of U.S. securities markets, and the performance of instruments trading in U.S. markets that represent foreign securities and baskets of foreign securities. The fund may also fair value securities in other situations, for example, when a particular foreign market is closed but the fund is open. The fund uses outside pricing services to provide it with closing market prices and information used for adjusting those prices. The fund cannot predict how often it will use closing prices and how often it will

adjust those prices. As a means of evaluating its fair value process, the fund routinely compares closing market prices, the next day's opening prices in the same markets, and adjusted prices. Other mutual funds may adjust the prices of their securities by different amounts.

How Your Purchase, Sale, or Exchange Price Is Determined

Purchases

The insurance companies purchase shares of the fund for their separate accounts, using premiums allocated by the contract holders or participants. Shares are purchased at the NAV next determined after the insurance company receives the premium payment in acceptable form. Initial and subsequent payments allocated to the fund are subject to the limits stated in the insurance contract prospectus issued by the insurance company.

When authorized by the fund, certain financial institutions or retirement plans purchasing fund shares on behalf of customers or plan participants through Financial Institution Services or Retirement Plan Services may place a purchase order unaccompanied by payment. Payment for these shares must be received by the time designated by the fund (not to exceed the period established for settlement under applicable regulations). If payment is not received by this time, the order may be canceled. The financial institution or retirement plan is responsible for any costs or losses incurred by the fund or T. Rowe Price if payment is delayed or not received.

Redemptions

The insurance companies redeem shares of the fund to make benefit or surrender payments under the terms of its contracts. Redemptions are processed on any day on which the New York Stock Exchange is open and are priced at the fund's NAV next determined after the insurance company receives a surrender request in acceptable form.

Note: The time at which transactions and shares are priced and the time until which orders are accepted may be changed in case of an emergency or if the New York Stock Exchange closes at a time other than 4 p.m. ET. There may be times when you are unable to contact us by telephone or access your account online due to extreme market activity, the unavailability of the T. Rowe Price Web site, or other circumstances. Should this occur, your order must still be placed and accepted prior to the time the New York Stock Exchange closes to be priced at that business day's NAV.

How You Can Receive the Proceeds From a Sale

Payment for redeemed shares will be made promptly, but in no event later than seven calendar days after receipt of your redemption order. However, the right of redemption may be suspended or the date of payment postponed in accordance with the Investment Company Act of 1940 (1940 Act). The amount received upon redemption of the shares of the fund may be more or less than the amount paid for the shares, depending on the fluctuations in the market value of the assets owned by the fund.

Under certain limited circumstances, the Board of Directors of a money fund may elect to suspend redemptions and postpone payment of redemption proceeds in order to facilitate an orderly liquidation of the money fund.

Excessive and Short-Term Trading

T. Rowe Price may bar excessive and short-term traders from purchasing shares.

Excessive or short-term trading in fund shares may disrupt management of a fund and raise its costs. Short-term traders in funds investing in foreign securities may seek to take advantage of an anticipated difference between the price of the fund's shares and price movements in overseas markets (see Pricing Shares and Receiving Sale Proceeds—How and When Shares Are Priced). While there is no assurance that T. Rowe Price can prevent all excessive and short-term trading, the Boards of Directors of the T. Rowe Price funds have adopted the following policies to deter such activity. Persons trading directly with T. Rowe Price or

indirectly through intermediaries in violation of these policies or persons believed to be short-term traders may be barred for a minimum of 90 calendar days or permanently from further purchases of T. Rowe Price funds. Purchase transactions placed by such persons are subject to rejection without notice. These policies apply to contract holders notwithstanding any provisions in your insurance contract.

- All persons purchasing shares held directly with a T. Rowe Price fund who make more than one purchase followed by one sale or one sale followed by one purchase involving the same fund within any 90-day calendar period will violate the policy.
- All persons purchasing fund shares held through an insurance company who hold the shares for less than 90 calendar days will violate the policy.

Omnibus Accounts

Intermediaries often establish omnibus accounts in the T. Rowe Price funds for their customers. In such situations, T. Rowe Price cannot always monitor trading activity by underlying contract holders. However, T. Rowe Price reviews trading activity at the omnibus account level and looks for activity that indicates potential excessive or short-term trading. If it detects suspicious trading activity, T. Rowe Price contacts the intermediary to determine whether the excessive trading policy has been violated and may request and receive personal identifying information and transaction histories for some or all contract holders to make this determination. If T. Rowe Price believes that its excessive trading policy has been violated, it will instruct the intermediary to take action with respect to the underlying contract holder in accordance with the policy.

Exceptions to Policy

Systematic purchases and redemptions are exempt from these policies. Redemptions to fund the periodic deduction of contract charges and fees and to pay death benefits are also exempt. Transactions in certain rebalancing and asset allocation programs may be exempt from the excessive trading policy subject to prior written approval by designated persons at T. Rowe Price. In addition, transactions by certain T. Rowe Price funds in other T. Rowe Price funds, as well as certain transactions by approved accounts managed by T. Rowe Price, may also be exempt.

T. Rowe Price generally seeks to enforce its excessive trading policies against individual contract holders when violations of its policies are discovered. The terms of your insurance contract may also restrict your ability to trade between the investment options available under your contract. T. Rowe Price may modify the 90-day policy set forth above and apply your insurance company's excessive trading policy (for example, in situations where an insurance contract or insurance company has restrictions on trading that differ from a T. Rowe Price fund's policy). These modifications would be authorized only if the fund believes that the modified policy would provide protection to the fund that is reasonably equivalent to the fund's regular policy. If you are trading your fund shares through an intermediary, you should consult with the intermediary to determine the excessive trading policy that applies to your trades in the fund.

There may be limitations on the ability of insurance companies to impose restrictions on the trading practices of certain contract holders. As a result, T. Rowe Price's ability to discourage excessive trading practices in this fund may be limited.

There is no guarantee that T. Rowe Price will be able to detect or prevent excessive or short-term trading.

RIGHTS RESERVED BY THE FUNDS

T. Rowe Price funds and their agents, in their sole discretion, reserve the following rights: (1) to waive or lower investment minimums; (2) to accept initial purchases by telephone; (3) to refuse any purchase or exchange order; (4) to cancel or rescind any purchase or exchange order placed through an intermediary, no later than the business day after the order is received by the intermediary (including, but not limited to,

orders deemed to result in excessive trading, market timing, or 5% ownership); (5) to cease offering fund shares at any time to all or certain groups of investors; (6) to freeze any account and suspend account services when notice has been received of a dispute regarding the ownership of the account, or a legal claim against an account, or there is reason to believe a fraudulent transaction may occur; (7) to otherwise modify the conditions of purchase and any services at any time; (8) to waive any wire fees charged to a group of shareholders; (9) to act on instructions reasonably believed to be genuine; (10) to involuntarily redeem your account at the net asset value calculated the day the account is redeemed, in cases of threatening conduct, suspected fraudulent or illegal activity, or if the fund or its agent is unable, through its procedures, to verify the identity of the person(s) or entity opening an account; and (11) for money funds, to suspend redemptions and postpone the payment of proceeds to facilitate an orderly liquidation of the fund.

In an effort to protect T. Rowe Price funds from the possible adverse effects of a substantial redemption in a large account, as a matter of general policy, no contract holder or participant or group of contract holders or participants controlled by the same person or group of persons will knowingly be permitted to purchase in excess of 5% of the outstanding shares of the fund, except upon approval of the fund's management.

DIVIDENDS AND OTHER DISTRIBUTIONS

For a discussion of the tax status of your variable annuity contract, please refer to the insurance contract prospectus.

Dividends and Other Distributions

The policy of the fund is to distribute, to the extent possible, all net investment income and realized capital gains to its shareholders, which are the separate accounts established by the various insurance companies in connection with their issuance of variable annuity and variable life contracts. Dividends from net investment income are declared daily and paid monthly for the Limited-Term Bond and Prime Reserve Portfolios; declared and paid quarterly for the Equity Income, Equity Index 500, and Personal Strategy Balanced Portfolios; and declared and paid annually for all other portfolios. All fund distributions made to a separate account will be reinvested automatically in additional fund shares, unless a shareholder (separate account) elects to receive distributions in cash. Under current law, dividends and distributions made by the fund to separate accounts generally are not taxable to the separate accounts, the insurance company, or the contract holder, provided that the separate account meets the diversification requirements of Section 817(h) of the Internal Revenue Code of 1986, as amended (Code), and other tax-related requirements are satisfied. The fund intends to diversify its investments in the manner required under Code Section 817(h).

ORGANIZATION AND MANAGEMENT

How is the fund organized?

T. Rowe Price Equity Series, Inc. (the “corporation”) was incorporated in Maryland in 1994. Currently, the corporation consists of seven series, each representing a separate pool of assets with different objectives and investment policies.

The Equity Income Portfolio is managed in a manner similar to the T. Rowe Price Equity Income Fund, a fund with the same objective and investment program as the portfolio but offered to the general public and not to insurance company separate accounts. However, investors should be aware that the Equity Income Portfolio is not the same as the T. Rowe Price Equity Income Fund and will not have the same performance. Investments made by the Equity Income Portfolio at any given time may not be the same as those made by the T. Rowe Price Equity Income Fund. Different performance will result due to factors such as differences in the cash flows into and out of the portfolio and fund, different fees and expenses, and differences in net assets and size of holdings.

Shareholders benefit from T. Rowe Price’s 73 years of investment management experience.

What is meant by “shares”?

Contract holders and participants indirectly (through the insurance company separate account) purchase shares when they put money in a fund offered as an investment option in their insurance contracts. These shares are part of a fund’s authorized capital stock, but share certificates are not issued.

Each share and fractional share entitles the shareholder (the insurance company separate account) to cast one vote per share on certain fund matters, including the election of fund directors/trustees, changes in fundamental policies, or approval of changes in the fund’s management contract.

The shares of the fund have equal voting rights. The various insurance companies own the outstanding shares of the fund in their separate accounts. These separate accounts are registered under the 1940 Act or are exempted from registration thereunder. Under current law, the insurance companies must vote the shares held in registered separate accounts in accordance with voting instructions received from variable contract holders or participants having the right to give such instructions.

Do T. Rowe Price funds have annual shareholder meetings?

The funds are not required to hold annual meetings and, to avoid unnecessary costs to fund shareholders, do not do so except when certain matters, such as a change in fundamental policies, must be decided. In addition, shareholders representing at least 10% of all eligible votes may call a special meeting for the purpose of voting on the removal of any fund director. If a meeting is held and you cannot attend, you can vote by proxy. Before the meeting, the insurance company will send or make available to you the fund’s proxy materials that explain the issues to be decided and include instructions on voting.

Who runs the fund?

General Oversight

The fund is governed by a Board of Directors that meets regularly to review fund investments, performance, expenses, and other business affairs. The Board elects the fund’s officers. At least 75% of Board members are independent of T. Rowe Price.

All decisions regarding the purchase and sale of fund investments are made by T. Rowe Price—specifically by the fund’s portfolio manager.

Investment Adviser

T. Rowe Price is the fund's investment adviser and oversees the selection of the fund's investments and management of the fund's portfolio. T. Rowe Price is an SEC-registered investment adviser that provides investment management services to individual and institutional investors, and sponsors and serves as adviser and subadviser to registered investment companies, institutional separate accounts, and common trust funds. The address for T. Rowe Price is 100 East Pratt Street, Baltimore, Maryland 21202. As of December 31, 2009, T. Rowe Price managed \$391 billion for more than 11 million individual and institutional investor accounts.

Portfolio Management

T. Rowe Price has established an Investment Advisory Committee with respect to the fund. The committee members are: Brian C. Rogers, Chairman, Jeffrey W. Arricale, Mark S. Finn, David R. Giroux, Paul D. Greene II, Thomas J. Huber, John D. Linehan, Jason B. Polun, Robert T. Quinn, Jr., and Eric L. Veiel. The committee chairman has day-to-day responsibility for managing the fund's portfolio and works with the committee in developing and executing the fund's investment program. Mr. Rogers has been chairman of the committee since the fund's inception in 1994. He joined T. Rowe Price in 1982 and his investment experience dates from 1979. He has served as a portfolio manager throughout the past five years. The Statement of Additional Information provides additional information about the portfolio manager's compensation, other accounts managed by the portfolio manager, and the portfolio manager's ownership of fund shares.

The Management Fee

The fund pays T. Rowe Price an annual fee that includes investment management services and ordinary, recurring operating expenses, but does not cover interest, taxes, brokerage, nonrecurring or extraordinary items. The fee is based on fund average daily net assets and is calculated and accrued daily. The fee for the fund for the most recent fiscal year was 0.85%.

In addition, from time to time, T. Rowe Price may make payments from its own resources to eligible insurance companies for recordkeeping and administrative services they provide to the fund for contract holders. These payments range from 0.15% to 0.25% of the average annual total assets invested by the separate accounts of the insurance company in the fund. T. Rowe Price may also reimburse insurance companies, broker-dealers, and other distributors for certain bona fide selling expenses associated with distribution of the insurance contracts in which the fund serves as an investment option. All payments described by this paragraph are paid by T. Rowe Price and not by the fund. As a result, the total expense ratio of the fund will not be affected by any such payments.

A discussion about the factors considered by the Board and its conclusions in approving the fund's investment management contract with T. Rowe Price appears in the fund's semiannual report to contract holders for the period ended June 30.

Variable Annuity and Variable Life Charges

Variable annuity and variable life fees and charges imposed on contract holders and participants by the insurance companies are in addition to those described previously and are described in the variable annuity and variable life contract prospectuses.

Variable Annuity and Variable Life Conflicts

The fund may serve as an investment medium for both variable annuity contracts and variable life insurance policies. Shares of the fund may be offered to separate accounts established by any number of insurance companies. The fund currently does not foresee any disadvantages to variable annuity contract owners due to the fact that the fund may serve as an investment medium for both variable life insurance policies and annuity contracts; however, due to differences in tax treatment or other considerations, it is theoretically possible that the interests of owners of annuity contracts and insurance policies for which the fund serves as an investment medium might at some time be in conflict. The fund's Board of Directors is required to moni-

tor events to identify any material conflicts between variable annuity contract owners and variable life policy owners, and will determine what action, if any, should be taken in the event of such a conflict. If such a conflict were to occur, an insurance company participating in the fund might be required to redeem the investment of one or more of its separate accounts from the fund. This might force the fund to sell securities at disadvantageous prices.

MORE INFORMATION ABOUT THE FUND AND ITS INVESTMENT RISKS

Consider your investment goals, your time horizon for achieving them, and your tolerance for risk. If you seek a relatively conservative equity investment that provides substantial dividend income along with the potential for capital growth, the fund could be an appropriate part of your overall investment strategy. This fund should not represent your complete investment program or be used for short-term trading purposes.

Equity investors should have a long-term investment horizon and be willing to wait out bear markets.

Dividends are normally a more stable and predictable component of total return than capital appreciation. While the price of a company's stock can go up or down in response to earnings or to fluctuations in the general market, stocks paying a high level of dividend income tend to be less volatile than those with below-average dividends and may hold up better in falling markets.

T. Rowe Price believes that income can be a significant contributor to total return over time and expects the fund's yield to be above that of the Standard & Poor's 500 Stock Index. The fund will tend to take a "value" approach and invest in stocks and other securities that appear to be temporarily undervalued by various measures, such as price/earnings ratios.

Value investors seek to invest in companies whose stock prices are low in relation to their real worth or future prospects. By identifying companies whose stocks are currently out of favor or misunderstood, value investors hope to realize significant appreciation as other investors recognize the stock's intrinsic value and the price rises accordingly.

Finding undervalued stocks requires considerable research to identify the particular company, analyze its financial condition and prospects, and assess the likelihood that the stock's underlying value will be recognized by the market and reflected in its price.

Some of the principal measures used to identify such stocks are:

Price/earnings ratio Dividing a stock's price by its earnings per share generates a price/earnings or P/E ratio. A stock with a P/E ratio that is significantly below that of its peers, the market as a whole, or its own historical norm may represent an attractive opportunity.

Price/book value ratio Dividing a stock's price by its book value per share indicates how a stock is priced relative to the accounting (i.e., book) value of the company's assets. A ratio below the market, that of its competitors, or its own historical norm could indicate a stock that is undervalued.

Dividend yield A stock's dividend yield is found by dividing its annual dividend by its share price. A yield significantly above a stock's own historical norm or that of its peers may suggest an investment opportunity.

A stock selling at \$10 with an annual dividend of \$0.50 has a 5% yield.

Price/cash flow Dividing a stock's price by the company's cash flow per share, rather than by its earnings or book value, provides a more useful measure of value in some cases. A ratio below that of the market or of its peers suggests the market may be incorrectly valuing the company's cash flow for reasons that could be temporary.

Undervalued assets This analysis compares a company's stock price with its underlying asset values, its projected value in the private (as opposed to public) market, or its expected value if the company or parts of it were sold or liquidated.

Restructuring opportunities Many well-established companies experience business challenges that can lead to a temporary decline in their financial performance. These challenges can include a poorly integrated acquisition, difficulties in product manufacturing or distribution, a downturn in a major end market, or an increase in industry capacity that negatively affects pricing. The shares of such companies frequently trade at depressed valuations. These companies can become successful investments if their management is sufficiently skilled and motivated to properly restructure the organization, their financial flexibility is adequate, the underlying value of the business has not been impaired, or their business environment improves or remains healthy.

Numerous situations exist in which a company's intrinsic value may not be reflected in its stock price. For example, a company may own a substantial amount of real estate that is valued on its financial statements well below market levels. If those properties were to be sold, or if their hidden value became recognized in some other manner, the company's stock price could rise. In another example, a company's management could spin off an unprofitable division into a separate company, potentially increasing the value of the parent. Or, in the reverse, a parent company could spin off a profitable division that has not drawn the attention it deserves, potentially resulting in higher valuations for both entities.

Sometimes new management can revitalize companies that have grown too large or lost their focus, eventually leading to improved profitability. Management could increase shareholder value by using excess cash flow to pay down debt, buy back outstanding shares of common stock, or raise the dividend.

As with any mutual fund, there can be no guarantee the fund will achieve its objective. The fund's share price may decline. Loss of money is a risk of investing in the fund.

A value approach to investing carries the risk that the market will not recognize a security's intrinsic value for a long time or that a stock judged to be undervalued may actually be appropriately priced.

The fund's emphasis on stocks of established companies paying high dividends and its potential investments in fixed-income securities may limit its potential for appreciation in a broad market advance. Such securities may be hurt when interest rates rise sharply. Also, a company may reduce or eliminate its dividend.

As with all equity funds, this fund's share price can fall because of weakness in the broad market, a particular industry, or specific holdings. The market as a whole can decline for many reasons, including adverse political or economic developments here or abroad, changes in investor psychology, or heavy institutional selling. The prospects for an industry or company may deteriorate because of a variety of factors, including disappointing earnings or changes in the competitive environment. In addition, our assessment of companies held by the fund may prove incorrect, resulting in losses or poor performance even in a rising market. Finally, the fund's investment approach could fall out of favor with the investing public, resulting in lagging performance versus other types of stock funds.

Foreign stock holdings may lose value because of declining foreign currencies or adverse political or economic events overseas.

The use of futures and options, if any, may subject the fund to additional volatility and potential losses. The use of derivatives involves risks different from, and possibly greater than, the risks associated with investing directly in the assets on which the derivatives are based. Derivatives can be highly volatile, illiquid, and difficult to value, and changes in the value of a derivative may not move in the direction anticipated by the portfolio manager. A fund could be exposed to significant losses if its counterparty becomes insolvent or if the fund is unable to close a derivatives position due to the lack of a liquid trading market. Derivatives involve the risk that a counterparty to the derivatives agreement will fail to make required payments or

comply with the terms of the agreement. There is also the possibility that limitations or trading restrictions may be imposed by an exchange or government regulation, which could adversely impact the value and liquidity of a derivatives contract subject to such regulation.

The Statement of Additional Information contains more detailed information about the fund and its investments, operations, and expenses.

INVESTMENT POLICIES AND PRACTICES

This section takes a detailed look at some of the types of fund securities and the various kinds of investment practices that may be used in day-to-day portfolio management. Fund investments are subject to further restrictions and risks described in the Statement of Additional Information.

Shareholder approval is required to substantively change fund objectives. Shareholder approval is also required to change certain investment restrictions noted in the following section as “fundamental policies.” Portfolio managers also follow certain “operating policies” that can be changed without shareholder approval. Shareholders will receive at least 60 days’ prior notice of a change in the policy requiring the fund to normally invest at least 80% of net assets in common stocks.

Fund holdings of certain kinds of investments cannot exceed maximum percentages of total assets, which are set forth in this prospectus. For instance, fund investments in certain derivatives are limited to 10% of total assets. While these restrictions provide a useful level of detail about fund investments, investors should not view them as an accurate gauge of the potential risk of such investments. For example, in a given period, a 5% investment in derivatives could have significantly more of an impact on a fund’s share price than its weighting in the portfolio. The net effect of a particular investment depends on its volatility and the size of its overall return in relation to the performance of all other fund investments.

Certain investment restrictions, such as a required minimum or maximum investment in a particular type of security, are measured at the time the fund purchases a security. The status, market value, maturity, credit quality, or other characteristics of a fund’s securities may change after they are purchased, and this may cause the amount of a fund’s assets invested in such securities to exceed the stated maximum restriction or fall below the stated minimum restriction. If any of these changes occur, it would not be considered a violation of the investment restriction and will not require the sale of an investment if it was proper at the time it was made (this exception does not apply to the fund’s borrowing policy). However, purchases by a fund during the time it is above or below the stated percentage restriction would be made in compliance with applicable restrictions.

Changes in fund holdings, fund performance, and the contribution of various investments are discussed in the shareholder reports sent to you.

Fund managers have considerable discretion in choosing investment strategies and selecting securities they believe will help achieve fund objectives.

Types of Portfolio Securities

In seeking to meet its investment objective, fund investments may be made in any type of security or instrument (including certain potentially high-risk derivatives described in this section) whose investment characteristics are consistent with its investment program. The following pages describe various types of fund securities and investment management practices.

Diversification As a fundamental policy, the fund will not purchase a security if, as a result, with respect to 75% of its total assets, more than 5% of the fund’s total assets would be invested in securities of a single issuer or more than 10% of the outstanding voting securities of the issuer would be held by the fund.

Fund investments are primarily in common stocks and, to a lesser degree, other types of securities as described below.

Common and Preferred Stocks

Stocks represent shares of ownership in a company. Generally, preferred stock has a specified dividend and ranks after bonds and before common stocks in its claim on income for dividend payments and on assets should the company be liquidated. After other claims are satisfied, common stockholders participate in company profits on a pro-rata basis; profits may be paid out in dividends or reinvested in the company to help it grow. Increases and decreases in earnings are usually reflected in a company's stock price, so common stocks generally have the greatest appreciation and depreciation potential of all corporate securities. Unlike common stocks, preferred stock does not ordinarily carry voting rights. While most preferred stocks pay a dividend, a fund may decide to purchase preferred stock where the issuer has omitted, or is in danger of omitting, payment of its dividend. Such investments would be made primarily for their capital appreciation potential.

Convertible Securities and Warrants

Investments may be made in debt or preferred equity securities convertible into, or exchangeable for, equity securities. Traditionally, convertible securities have paid dividends or interest at rates higher than common stocks but lower than nonconvertible securities. They generally participate in the appreciation or depreciation of the underlying stock into which they are convertible, but to a lesser degree than common stock. Some convertible securities combine higher or lower current income with options and other features. Warrants are options to buy, directly from the issuer, a stated number of shares of common stock at a specified price anytime during the life of the warrants (generally, two or more years). Warrants can be highly volatile, have no voting rights, and pay no dividends.

Foreign Securities

Investments may be made in foreign securities. These include nondollar-denominated securities traded outside of the U.S. and dollar-denominated securities of foreign issuers traded in the U.S. Investing in foreign securities involves special risks that can increase the potential for losses. These include: exposure to potentially adverse local, political, and economic developments such as war, political instability, hyperinflation, currency devaluations, and overdependence on particular industries; government interference in markets such as nationalization and exchange controls, expropriation of assets, or imposition of punitive taxes; potentially lower liquidity and higher volatility; possible problems arising from accounting, disclosure, settlement, and regulatory practices and legal rights that differ from U.S. standards; and the chance that fluctuations in foreign exchange rates will decrease the investment's value (favorable changes can increase its value). These risks are heightened for investments in emerging markets. The fund may purchase American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs), which are certificates evidencing ownership of shares of a foreign issuer. ADRs and GDRs trade on established markets and are alternatives to directly purchasing the underlying foreign securities in their local markets and currencies. Such investments are subject to many of the same risks associated with investing directly in foreign securities.

Operating policy Fund investments in foreign securities are limited to 25% of total assets. Subject to the overall limit on fund investments in foreign securities, there is no limit on the amount of foreign investments that may be made in emerging markets.

Debt Instruments

From time to time, the fund may invest in bonds and debt securities of any type, including municipal securities, without restrictions on quality or rating. Investments in a company also may be made through a privately negotiated note or loan, including loan assignments and participations. These investments will be made in companies, municipalities, or entities that meet fund investment criteria. Such investments may have a fixed, variable, or floating interest rate. The price of a bond or fixed rate debt security usually fluctuates with changes in interest rates, generally rising when interest rates fall and falling when interest rates rise.

Investments involving below investment-grade issuers or borrowers can be more volatile and have greater risk of default than investment-grade bonds. Certain of these investments may be illiquid and holding a loan could expose the fund to the risks of being a direct lender.

Operating policy Fund investments in noninvestment-grade debt securities (“junk bonds”) and loans are limited to 10% of total assets. Fund investments in convertible securities are not subject to this limit.

Futures and Options

Futures, a type of potentially high-risk derivative, are often used to manage or hedge risk because they enable the investor to buy or sell an asset in the future at an agreed-upon price. Options, another type of potentially high-risk derivative, give the investor the right (when the investor purchases the option), or the obligation (when the investor “writes” or sells the option), to buy or sell an asset at a predetermined price in the future. Futures and options contracts may be bought or sold for any number of reasons, including: to manage exposure to changes in securities prices, foreign currencies, and credit quality; as an efficient means of increasing or decreasing a fund’s exposure to a specific part or broad segment of the U.S. market or a foreign market; in an effort to enhance income; to protect the value of portfolio securities; and to serve as a cash management tool. Call or put options may be purchased or sold on securities, futures, and financial indices.

Futures contracts and options may not always be successful hedges; their prices can be highly volatile; using them could lower fund total return; and the potential loss from the use of futures can exceed a fund’s initial investment in such contracts.

Operating policies Initial margin deposits on futures and premiums on options used for non-hedging purposes will not exceed 5% of net asset value. The total market value of securities covering call or put options may not exceed 25% of total assets. No more than 5% of total assets will be committed to premiums when purchasing call or put options.

Hybrid Instruments

These instruments (a type of potentially high-risk derivative) can combine the characteristics of securities, futures, and options. For example, the principal amount, redemption, or conversion terms of a security could be related to the market price of some commodity, currency, securities, or securities index. Such securities may or may not bear interest or pay dividends. Under certain conditions, the redemption value of a hybrid could be zero.

Hybrids can have volatile prices and limited liquidity, and their use may not be successful.

Operating policy Fund investments in hybrid instruments are limited to 10% of total assets.

Investments in Other Investment Companies

A fund may invest in other investment companies, including open-end funds, closed-end funds, and exchange-traded funds (ETFs).

A fund may purchase the securities of another investment company to temporarily gain exposure to a portion of the market while awaiting purchase of securities or as an efficient means of gaining exposure to a particular asset class. The fund might also purchase shares of another investment company to gain exposure to the securities in the investment company’s portfolio at times when the fund may not be able to buy those securities directly. Any investment in another investment company would be consistent with the fund’s objective and investment program.

The risks of owning another investment company are generally similar to the risks of investing directly in the securities in which it invests. However, an investment company may not achieve its investment objective or execute its investment strategy effectively, which may adversely affect the fund’s performance. In addition, because closed-end funds and ETFs trade on a secondary market, their shares may trade at a premium or discount to the actual net asset value of its portfolio securities and their potential lack of liquidity could result in greater volatility.

As a shareholder of an investment company not sponsored by T. Rowe Price, the fund must pay its pro-rata share of that investment company's fees and expenses. The fund's investments in non-T. Rowe Price investment companies are subject to the limits that apply to investments in other funds under the Investment Company Act of 1940.

A fund may also invest in certain other T. Rowe Price funds as a means of gaining efficient and cost-effective exposure to certain asset classes, provided the investment is consistent with the fund's investment program and policies. Such an investment could allow the fund to obtain the benefits of a more diversified portfolio than might otherwise be available through direct investments in the asset class, and will subject the fund to the risks associated with the particular asset class. Examples of asset classes in which other T. Rowe Price mutual funds concentrate their investments include high yield bonds, floating rate loans, international bonds, emerging market bonds, and emerging market stocks. If the fund invests in another T. Rowe Price fund, the management fee paid by the fund will be reduced to ensure that the fund does not incur duplicate management fees as a result of its investment.

Illiquid Securities

Some fund holdings may be considered illiquid because they are subject to legal or contractual restrictions on resale or because they cannot be sold in the ordinary course of business within seven days at approximately the prices at which they are valued. The determination of liquidity involves a variety of factors. Illiquid securities may include private placements that are sold directly to a small number of investors, usually institutions. Unlike public offerings, such securities are not registered with the Securities and Exchange Commission (SEC). Although certain of these securities may be readily sold, for example under Rule 144A of the Securities Act of 1933, others may have resale restrictions and can be illiquid. The sale of illiquid securities may involve substantial delays and additional costs, and a fund may only be able to sell such securities at prices substantially less than what it believes they are worth.

Operating policy Fund investments in illiquid securities are limited to 15% of net assets.

Types of Investment Management Practices

Reserve Position

A certain portion of fund assets will be held in reserves. Fund reserve positions can consist of: 1) shares of one or both of the T. Rowe Price internal money funds; 2) short-term, high-quality U.S. and foreign dollar-denominated money market securities, including repurchase agreements; and 3) U.S. dollar or non-U.S. dollar currencies. For temporary, defensive purposes, there is no limit on a fund's holdings in reserves. If a fund has significant holdings in reserves, it could compromise the fund's ability to achieve its objectives. The reserve position provides flexibility in meeting redemptions, paying expenses, and in the timing of new investments and can serve as a short-term defense during periods of unusual market volatility. Non-U.S. dollar reserves are subject to currency risk.

Managing Foreign Currency Risk

Investors in foreign securities may attempt to hedge their exposure to potentially unfavorable currency changes. The primary means of doing this is through the use of forwards, which are contracts between two counterparties to exchange one currency for another on some future date at a specified exchange rate. However, futures, swaps, and options on foreign currencies may also be used. In certain circumstances, a different currency may be substituted for the currency in which the investment is denominated, a strategy known as proxy hedging. If a fund were to engage in any of these foreign currency transactions, it would be primarily to protect its foreign securities from adverse currency movements relative to the U.S. dollar. Such transactions involve, among other risks, the risk that anticipated currency movements will not occur, which could reduce fund total return. There are certain markets, including many emerging markets, where it is not possible to engage in effective foreign currency hedging.

Borrowing Money and Transferring Assets

A fund may borrow from banks and other T. Rowe Price funds for temporary emergency purposes to facilitate redemption requests, or for other purposes consistent with fund policies as set forth in this prospectus. Such borrowings may be collateralized with fund assets, subject to restrictions.

Fundamental policy Borrowings may not exceed 33¹/₃% of total assets.

Operating policy A fund will not transfer portfolio securities as collateral except as necessary in connection with permissible borrowings or investments, and then such transfers may not exceed 33¹/₃% of total assets. A fund will not purchase additional securities when borrowings exceed 5% of total assets.

Lending of Portfolio Securities

A fund may lend its securities to broker-dealers, other institutions, or other persons to earn additional income. Risks include the potential insolvency of the broker-dealer or other borrower that could result in delays in recovering securities and capital losses. Additionally, losses could result from the reinvestment of collateral received on loaned securities in investments that default or do not perform as expected.

Fundamental policy The value of loaned securities may not exceed 33¹/₃% of total assets.

Portfolio Turnover

Turnover is an indication of frequency of trading. A fund will not generally trade in securities for short-term profits, but, when circumstances warrant, securities may be purchased and sold without regard to the length of time held. Each time a fund purchases or sells a security, it incurs a cost. This cost is reflected in its net asset value but not in its operating expenses. The higher the turnover rate, the higher the transaction costs and the greater the impact on a fund's total return. Higher turnover can also increase the possibility of taxable capital gain distributions. The fund's portfolio turnover rates are shown in the Financial Highlights table.

DISCLOSURE OF FUND PORTFOLIO INFORMATION

The fund's portfolio holdings are disclosed on a regular basis in its semiannual and annual reports to shareholders, and on Form N-Q, which is filed with the SEC within 60 days of the fund's first and third fiscal quarter-end. In addition, the fund discloses its calendar quarter-end portfolio holdings on troweprice.com 15 calendar days after each quarter. Under certain conditions, up to 5% of the fund's holdings may be included in this portfolio list without being individually identified. Generally, securities would not be individually identified if they are being actively bought or sold and it is determined that the quarter-end disclosure of the holding could be harmful to the fund. A security will not be excluded for these purposes from a fund's quarter-end holdings disclosure for more than one year. Money funds also disclose their month-end portfolio holdings on troweprice.com five business days after each month. The quarter-end portfolio holdings will remain on the Web site for one year and the month-end money fund portfolio holdings will remain on the Web site for at least four months. The fund also discloses its 10 largest holdings on troweprice.com on the seventh business day after each month-end. These holdings are listed in alphabetical order along with the aggregate percentage of the fund's total assets that these 10 holdings represent. Each monthly top 10 list will remain on the Web site for six months. A description of the fund's policy and procedures with respect to the disclosure of portfolio information is in the Statement of Additional Information.

FINANCIAL HIGHLIGHTS

The Financial Highlights table, which provides information about the fund's financial history, is based on a single share outstanding throughout the periods shown. The table is part of the fund's financial statements, which are included in its annual report and are incorporated by reference into the Statement of Additional Information (available upon request). The total returns in the table represent the rate that an investor would have earned or lost on an investment in the fund (assuming reinvestment of all dividends and distributions and no payment of account or [if applicable] redemption fees). The financial statements in the annual report were audited by the fund's independent registered public accounting firm, PricewaterhouseCoopers LLP.

Financial Highlights

	<i>Year ended December 31</i>				
	2005*	2006*	2007*	2008*	2009*
